- The “FAB 15” Stocks in the Oil & Gas Industry — The Fruits of our Research
- Subscription Blow-out pricing structure for a year of insightful updates via newsletters & email blasts.
- Our goal is to enlighten you on the performers in this growing market.

INAUGURAL ISSUE OF THE FOSSILTRAX NEWSLETTER

Welcome to the first issue of the FossilTrax Newsletter. In this sample issue we will discuss our strategy in bringing you information gleaned from research on the shakers & movers in the booming Oil & Gas Industry.

We are just researchers and not financial advisors. We will not be making buy, hold, or sell recommendations.

This newsletter will however present you with some stock and fund issues that present some of the best potentials for growth in 2008 as the sector begins to dominate the stock market.

Beware as all Oil & Gas companies are not created equal. Many do not have sustained earnings, growth potential, or increasing market share. That's why we are here to ferret out the issues with potential for meeting our criteria.

Our Criteria is:

- A. Growth Potential
- B. Increasing Earnings
- C. Market Potential
- D. Increasing share value

We are continually sifting through information resources on literally hundreds of companies to find the best picks that meet our criteria.

In this issue we will be highlighting the “Fab 15”, and also point out a few that may actually lag behind the DOW & S&P 500 averages in 2008. It's not as simple as throwing a dart at a listing of Oil & Gas companies to find the ones with the best potential for growth. That takes research, and we aim to deliver stock picks that meet that goal.

As this first issue is a “Sample” issue, the names of the companies & their stock tickers will be only be included with a subscription. As a registered customer you

will receive this inaugural issue with those companies names and basic performance charts included. In addition with your regular 1 year subscription you will also receive 11 more electronic newsletters (approx. 1 each month), and 24 bi-weekly news updates via email.

We are a green company, so our product is only delivered electronically. We do not ship paper copies of our newsletter. If you desire a printed copy, you'll need to do that for yourself. But keep in mind that this is a copyrighted publication, and further distribution is not authorized.

Please stay tuned to our web site & pick up the news headlines there as they develop. Our bi-weekly update email will elaborate on the links that we post in general & lead into the next issue of the newsletter when prepared.

Be informed & celebrate success.

“DRILL-DOWN” RESEARCH AT A GREAT VALUE

When you subscribe you will receive the newsletters & email updates mentioned above at just a fraction of the cost of many market research products. With a single well placed purchase you may actually pay for your subscription the first day or two.

Our subscription fee is just \$39.95 per year (12 issues of the newsletter & email updates as needed.)

That's a far cry from many other products that cost hundreds of dollars per year or

more. The time you save will be worth the small cost.

We think we will be delivering a great value to other independent investors—just like our research team.

FAB 15 FOR 2008

The main story for this issue of the FossilTrax News is a baseline portfolio of stocks and ETF's that were chosen for their earnings, share appreciation, and growth potential.

As always there's never a sure deal when choosing and purchasing equities, but this portfolio has some real performers when conducting a lookback and forward P/E projections based on 2009 earnings estimates.

Our method of forward P/E projection is fairly simple:

Use the latest closing price divided by next years earnings. It provides a what-if based on today's price for what an P/E ratio "might" be next year. In all reality, if earnings hold up to expectations the price will adjust upwards next year. The thing to look for is if next year's projected P/E is less than the latest 4 quarters P/E ratio. That signals potential growth.

Is this foolproof? No. Is it just another method to gauge where a stock might be next year if conditions & earnings hold very close to projections? Yes. You decide.

The current list of issues in the FAB 15 list will be on the last pages of this newsletter. The growth of these highlighted companies ranges from less than 1% to well over 100% in just the first 5 months of this year !

Will the FAB 15 finish the year ahead overall? Nobody has that answer, nor will they until the final trading day of 2008. But our research is indicating that they will.

Have these stocks maxed out their capacity to grow this year? Once again, we'll find out on the last trading day.

INDUSTRY BUZZ

As of the end of May there are hints of federal investigations into manipulation of the oil and gas markets by speculators.

We will be watching this development as time goes on, and will alert you to any findings that come out of this investigation.

Does this change the potential for growth in Oil and Gas stocks and funds. Yes, and no. That would be further broken down to be a yes short term as if there are findings of corruption or wrongdoing in this trading sector prices would surely fall short term. But over the long haul they will rebound as the indicators

for Peak Oil are ringing loudly.

When demand outstrips supply prices go north. That is the trend that is now firmly entrenched in the global economies. Some decrease of demand will occur as prices skyrocket, but everybody needs oil, so prospects for future gains will continue.

"The growth of these highlighted companies ranges from less than 1% to well over 100% in just the first 5 months of this year !"

BROADER MARKET OUTLOOK

As this inaugural issue of the FossilTrax News hits the street the broader markets are still very unsettled in the wake of the crash of the financials, looming inflation, and a possible narrowly skirted recession.

Gold peaked in early spring and has been fluctuating widely throughout May of 2008. It usually is in lock

step with oil, but for now it is on a divergent path that is seemingly influenced by more than just the energy market.

Commodities such as grain, and fertilizer have also fluctuated widely but remain higher for the year. While the price of crude remains high this reality will remain. That probably means that it's here to stay for the foreseeable

future.

Stocks rebounded in mid April, had a slight drop in early May, and another peak towards the end of the month only to close much lower by the end of May. You can expect this choppy performance in the market as a whole to continue until the financial fiasco is over. *Oil & Gas will remain a hot market sectors for many years.*

POLITICAL STRIFE

No newsletter that covers the Oil & Gas industry would be complete without at least touching on the topic of political strife.

This year production interruptions in oil & gas production have had a tangible effect in several areas. News stories have chronicled recent problems in Nigeria & the Sudan.

Warring factions have targeted pipelines in these regions, and have intermittently affected the flow of oil to transport locations.

This trend will likely continue and although they haven't seriously impacted overall operations as a whole in these regions, even small reductions in their production results in nearly immediate fluctuations in crude oil prices on fears of supply reduction.

We are watching developments very closely as a serious outage will greatly influence the price of oil if even for a short period. This type of event can cause protracted market appreciation of oil and gas stocks. Usually the effect is broad-based throughout the industry, but depending on the location it may also adversely affect selected companies and their future earnings.

We monitor the newswires and if there is cause for concern with any of the companies that we cover, we will update our readers.

HURRICANE SEASON 2008

Will this hurricane season produce a storm in the Gulf of Mexico?

That remains to be seen, but if we get a strong storm in the north-central, or northwest region of the Gulf of Mexico this year, production of Natural Gas and Oil production will be greatly affected as it was

in 2004 & 2005. Additionally refineries in the coastal Texas region are especially vulnerable to these storms.

Stay tuned to weather developments in this region as it will have a profound effect on energy production in the U.S. It is our hope that this will be

another quiet year as the 2006-2007 seasons were. Global production, and more specifically U.S. production of gasoline is already strapped. We don't need that kind of pressure in this tumultuous economy.

If there is a big storm in the Gulf this year prices will soar.

"If there is a big storm in the Gulf this year prices will soar."

YOUR FEEDBACK COUNTS

As this newsletter is just now getting off the ground we solicit your feedback.

If there is a feature that you would like to see, let us know as we will be adding areas of interest to the newsletter as time goes on.

If you want to send us information concerning a breaking story that you would like to

see highlighted in the next newsletter send us an email at:
editor@fossiltrax.com

Due to the amount of responses we may not send you an immediate reply, but our goal will be to answer all inquiries as time permits.

Most of our subscribers are already active investors so we

have opted to include simple charting in our publication. If you would rather see more complicated charts in the market data section let us know. For now we are using basic charts to show overall movement & trending. We have the capability to add technical features if they are desired. Our guess is that most people simply want the tickers of the companies we research, but let us know your desires.

Be informed and Celebrate Success

The research team of FossilTrax would like to thank you for viewing our newsletter. If you need independent research data on the Oil & Gas markets we hope that you will consider us as a valuable research source.

We do not accept payment from any Oil & Gas company for any purpose. Each company is researched & given a place in our newsletter based on our placement criteria listed on the front page of this document.

BACKTALK EDITORIAL

There are other companies to watch in this market. Some of the largest companies will produce gains in 2008. Noticeably in that crowd will include Exxon—XOM, and Chevron—CVX. Out of the two, the greatest returns will likely be Chevron. The gains will likely be much less than our FAB 15 over the course of this year and next, but not necessarily.

Other areas to consider are services companies that provide pipelines, cranes, and other infrastructure elements to the Oil & Gas Industry. We have included a couple of those in our market research performers list. Some of the other such companies are Manitowoc—MTW, Allis Chalmers—ALY, and many more. We'll cover more of these in selected spotlights in upcoming issues and over time some may be added to

our top picks list that is currently comprised of 15 stocks and funds.

We may also occasionally cover some stock issues for general interest that may not be specifically related to the Oil & Gas Industry but may be of interest to our readers. We will not however, devote a lot of individual research to those spotlighted stocks or funds.

In that light, the second best performing sector in this year's market behind energy is Technology. Significant gains in the sector are largely due to offshore sales in Asia & Europe. This trend can be expected to continue for the remainder of this year, and possibly into next year as well. Companies like Dell—DELL, Intel—INTC, and HP—HPQ can be considered to be some of the front runners in that pack.

Commodities will also remain hot for this year. Corn is running hot as Ethanol is impacting supply. A recent scare globally caused price appreciation in Rice.

The precious metals market has fluctuated widely early this year as several power issues in South Africa, and other locations caused some disruptions in production. Platinum is still on a hot running streak as is Rhodium, and Silver as well. One of the ways to profit from the precious metals market is to invest in certified coins. That is because in addition to the value of the metal there is a numismatic value associated with the item.

Stay tuned for more of our BackTalk in the issues to follow this inaugural issue of The FossilTrax News.—FTN Team
